

AI for Proposal & SOP Writing

Create. Structure. Impress.

Professional documents, powered by AI.

SMART DRAFTING

Generate well-structured proposals & SOPs in minutes.

ACCURATE & CLEAR

AI ensures clarity, consistency and error-free content.

CUSTOMIZED CONTENT

Tailored to your purpose, audience and requirements.

PROFESSIONAL IMPACT

Well-formatted, persuasive documents that leave a lasting impression.

Save Time

Automate writing and formatting to focus on what matters.

Better Results

Create documents that are clear, concise and highly effective.

Multiple Formats

Export in Word, PDF, PowerPoint and more.

AI Assistant

Suggesting best structure, content and improvements...

Learning Objectives

By the end of this session, you will be able to:

Understand what a **business proposal** is.

Create a **structured proposal** using AI.

Understand what an **SOP** is and why businesses use it.

Use AI to convert processes into **clear SOPs**.

Understand the difference between an **SOP** and a **policy**.

Use AI to draft **policies** while maintaining human review and compliance.

Why Business Documentation Matters

Every organization has processes, rules, and plans.

For example:

A company might need documents for:

Launching a product

Requesting a budget

Hiring employees

Handling customer complaints

Processing invoices

Managing leave

Using company equipment

Onboarding employees

Without proper documentation,
employees may perform the same task differently.

Good documentation creates:

Consistency

+

Clarity

+

Accountability

AI can help businesses create these documents much faster.

Three Important Business Documents

Today's session focuses on:

1 Business Proposal

• Answers: •

“Why should we do this?”

2 SOP — Standard Operating Procedure

• Answers: •

“How should we do this?”

3 Policy

• Answers: •

“What rules should we follow?”

What is a Business Proposal?

A **business proposal** is a document that presents an idea, solution, project, or service and explains why it should be approved.

A proposal normally tries to **convince someone to take action.**

For example:

“ We should implement an AI customer-support chatbot. ”

The proposal needs to explain:

What **problem** exists?

What **solution** are we proposing?

How much will it **cost**?

What **benefits** will we receive?

How long will **implementation** take?

Business Proposal Structure

A simple **business proposal** can contain:

A clear structure helps the reader understand the idea and makes your proposal more **convincing and effective**.

Why structure matters:

- ✓ Helps the reader **follow** your idea easily
- ✓ Covers **all important aspects**
- ✓ Increases **clarity** and **professionalism**
- ✓ Improves chances of **approval**

Tip: Keep each section clear, concise, and focused on the needs of your audience.

Example Business Proposal

Proposal: AI Customer Support Assistant

1. Problem

- The customer support team receives approximately **1,000** customer queries every day.
- Many questions are repetitive.
- This increases response time and employee workload.

2. Proposed Solution

Implement an AI-powered customer support assistant that can answer frequently asked questions and route complex issues to human agents.

3. Benefits

- ✓ Faster responses
- ✓ Reduced workload
- ✓ 24/7 basic support
- ✓ Improved customer experience

4. Implementation

Phase 1: Collect FAQs

Phase 2: Configure AI assistant

Phase 3: Test responses

Phase 4: Launch

Phase 5: Monitor performance

5. Estimated Cost

₹2,00,000 initial implementation cost.

6. Timeline

Approximately 6 weeks.

7. Recommendation

Proceed with a pilot implementation for one customer support category before expanding the system.

PROPOSAL: IMPLEMENTING AN AI CUSTOMER-SUPPORT ASSISTANT

For: A Mid-Sized E-commerce Company

This proposal outlines a plan to implement an AI-powered customer-support assistant to enhance efficiency, reduce response times, and improve customer satisfaction.

1. PROBLEM

The support team handles approximately 1,000 queries per day, many of which are repetitive. This leads to:

- Longer response times
- Increased workload for support agents
- Higher operational costs
- Customer frustration during peak times

2. PROPOSED SOLUTION

Implement an AI-powered customer-support assistant that can:

- Instantly answer frequently asked questions (FAQs)
- Guide customers through common issues
- Route complex or high-priority queries to human agents
- Learn continuously from interactions to improve accuracy

The solution will integrate with the existing helpdesk, website, and other communication channels (chat, email, WhatsApp, etc.).

3. BENEFITS

- Faster responses and 24/7 basic support
- Reduced workload for human agents (estimated 30–40% reduction in repetitive queries*)
- Improved customer experience and satisfaction
- Better scalability during peak seasons
- Lower cost per resolved query over time

ASSUMPTIONS (Please Review)

- The current daily query volume (≈1,000) is consistent.
- At least 60–70% of queries are suitable for automated handling.
- The company will provide necessary access to data and systems.

These assumptions are based on the information provided and industry benchmarks. Actual results may vary.

4. ESTIMATED COST (Assumptions)

Item	Estimated Cost (INR)
AI Platform / Licensing (Annual)	₹1,20,000 – ₹1,50,000
Implementation & Integration	₹60,000 – ₹80,000
Customization & Training	₹20,000 – ₹30,000
Total Initial Investment (Year 1)	₹2,00,000 – ₹2,60,000

Note: Ongoing annual maintenance is estimated at ₹50,000 – ₹80,000.
(Assumptions: Based on mid-range vendor pricing for similar solutions.)

5. TIMELINE (Assumptions)

- Week 1–2: Requirements finalization & FAQ collection
- Week 3–4: Solution configuration & integration
- Week 5: Testing & user acceptance
- Week 6: Pilot launch
- Week 7+: Full rollout & continuous optimization

Total Estimated Timeline: ~6 weeks

6. RISKS (Assumptions)

- Inaccurate responses if training data is incomplete
- Integration challenges with existing systems
- User adoption and change management
- Dependence on vendor reliability and support

Mitigation: Phased rollout, continuous training, and regular performance monitoring.

7. RECOMMENDATION

Proceed with a pilot implementation for one customer-support category (e.g., order tracking & returns) to validate performance and ROI. Upon successful evaluation, expand to other support categories and channels.

- Internal resources will be available for review, testing, and approvals.
- Costs are estimates and may vary based on vendor, scope, and customization.

Why “Assumptions” Matter

1. You Don't Know the Exact Cost

Suppose you don't know the actual implementation cost of a solution.

There may be many variables you don't have today.

2. Don't Present Guesses as Facts

Don't ask AI to invent a number and present it as a fact.

That can mislead decision-makers.

3. Ask for an Assumption and Label It Clearly

Instead, ask AI to:

“Provide an estimated cost range and clearly label it as an assumption.”

This keeps your proposal transparent and trustworthy.

4. Prevent a Common Business AI Problem

AI-generated assumptions can sometimes be mistaken for real data.

Clearly labeling assumptions prevents wrong decisions based on uncertain information.

Key Takeaway

Assumptions are not facts.

Label them. Review them. Validate them. Then use them to make informed decisions.

What is an SOP?

SOP = Standard Operating Procedure

An SOP is a documented set of instructions explaining **how to perform a specific task or process.**

Simple Definition:

An SOP tells employees exactly how to perform a recurring process consistently.

Why SOPs Are Important

Ensures Consistency

Everyone performs the task the same way.

Reduces Errors

Step-by-step instructions reduce mistakes.

Improves Training

New employees learn processes faster.

Increases Efficiency

Saves time and improves productivity.

EXAMPLE

Process: Onboarding a New Employee

Without an SOP

Employee A:

Creates an email account → gives laptop → schedules orientation.

Employee B:

Gives laptop → creates account → forgets orientation.

Results:

- ⊗ Inconsistency
- ⊗ Missed steps
- ⊗ Confusion

With an SOP

- 1 Step 1 → Create employee account
- 2 Step 2 → Assign employee ID
- 3 Step 3 → Prepare laptop
- 4 Step 4 → Create email account
- 5 Step 5 → Conduct orientation
- 6 Step 6 → Complete onboarding checklist

Everyone follows the same process.

Key Takeaway

An SOP brings **clarity, consistency,** and **accountability** to every process.

Basic SOP Structure

A professional Standard Operating Procedure (SOP) follows a clear structure to ensure clarity, consistency, and compliance.

★ Why a Structure Matters

- Consistency**
Ensures tasks are performed the same way every time.
- Clarity**
Provides clear instructions for everyone involved.
- Quality**
Helps maintain quality and reduce errors.
- Accountability**
Defines roles, responsibilities, and documentation.

STANDARD OPERATING PROCEDURE (SOP)

EMPLOYEE ONBOARDING

This SOP describes the standard steps for onboarding a new employee.

	SOP ID	:	HR-ONB-001
	Version	:	1.0
	Effective Date	:	09 May 2025
	Owner	:	HR Department

1. PURPOSE

The purpose of this SOP is to ensure a consistent and smooth onboarding experience for all new employees.

2. SCOPE

This SOP applies to all new full-time, part-time, and contract employees of the organization.

3. RESPONSIBILITIES

- HR Department:** Creates employee record and provides company policies.
- IT Department:** Creates accounts and prepares laptop.
- Manager:** Introduces the new employee to the team.
- Employee:** Completes mandatory training.

4. REQUIRED TOOLS

- HRIS / Employee Management System
- Email System
- IT Service Management System
- Laptop & Peripherals
- Company Policy Documents
- Learning Management System (LMS)

RECOMMENDATIONS (Not Part of Core Process)

- Schedule a welcome session on the employee's first day.
- Assign a buddy or mentor for the first few weeks.

5. STEP-BY-STEP PROCEDURE

Step	Process Step	Responsible	Description
1	HR creates employee record	HR	HR creates the employee record in the HR system with basic details.
2	IT creates accounts	IT	IT creates required system accounts (email, network, applications).
3	IT prepares laptop	IT	IT sets up and configures the laptop with required software and access.
4	HR provides company policies	HR	HR shares company policies and documents with the employee.
5	Manager introduces employee to the team	Manager	Manager introduces the new employee to the team and explains role expectations.
6	Employee completes mandatory training	Employee	Employee completes mandatory training courses in the LMS.

6. QUALITY CHECKS

- Verify that all employee details are correctly entered in the HR system.
- Confirm that all required accounts are active and accessible.
- Ensure the laptop is configured and tested before handover.
- Confirm that the employee acknowledge receipt of company policies.
- Verify that mandatory training is completed within the required time.

7. EXCEPTIONS

- If IT account creation is delayed, escalate to IT Manager immediately.
- If laptop setup is delayed, provide a temporary device if available.
- If employee is unable to complete training on time, inform the Manager and HR.

- Collect feedback from new employees after 30 days.

- Automate notifications for pending onboarding tasks.

What is a Policy?

A **policy** is a formal rule or guideline that explains what an organization expects people to do or not do.

A policy answers:
“What is allowed,
required, or prohibited?”

Examples:

- ✓ Leave Policy
- ✓ Work-from-Home Policy
- ✓ Data Security Policy
- ✓ AI Usage Policy
- ✓ Expense Policy
- ✓ Social Media Policy

SOP vs Policy

This distinction is extremely important.

POLICY		SOP	
	Defines rules		Defines procedures
	What should/shouldn't happen		How something should happen
	Organization-wide guidance		Step-by-step process
	Focuses on requirements		Focuses on execution
	Example: Password Policy		Example: How to reset a password

EASY WAY TO REMEMBER

Policy = WHAT & WHY

SOP = HOW

Example: Company AI Policy

Imagine a company wants to establish rules for employees using AI.

AI USAGE POLICY

Employees may use approved AI tools for:

- ✓ Brainstorming
- ✓ Drafting documents
- ✓ Summarization
- ✓ Non-confidential research

Employees must not enter:

- ✗ Customer personal information
- ✗ Passwords
- ✗ Confidential financial information
- ✗ Trade secrets
- ✗ Restricted company documents

AI-generated content must be reviewed before external distribution.

INTERNAL AI USAGE POLICY

This policy sets guidelines for the responsible and secure use of Artificial Intelligence (AI) tools by all employees of our company.

-  **Effective Date** : May 9, 2025
-  **Applies To** : All Employees
-  **Policy Owner** : Compliance Department

1

APPROVED AI USE

Employees may use approved AI tools to support their work in the following areas:

- Brainstorming and idea generation
- Drafting, editing, and summarizing documents
- Research and information gathering from public sources
- Increasing productivity and efficiency in daily tasks

2

PROHIBITED DATA

Employees must not enter or upload the following into any AI tool:

- Customer personal information (PII)
- Passwords, API keys, or security credentials
- Confidential financial information
- Trade secrets or intellectual property
- Restricted or classified company documents

3

HUMAN REVIEW REQUIREMENTS

All AI-generated content must be reviewed by a qualified employee before use or sharing. Employees are responsible for ensuring accuracy, completeness, and appropriateness.

4

CONFIDENTIAL INFORMATION

Employees must handle all confidential company information with care. Do not share, copy, or input confidential information into public AI tools. Use only approved enterprise AI solutions where required.

5

EXTERNAL COMMUNICATION

Do not use AI tools to create content for external communication (e.g., customer-facing materials, press releases, social media) unless it has been reviewed and approved by the appropriate team.

6

EMPLOYEE RESPONSIBILITIES

Employees must use AI tools ethically, responsibly, and in compliance with this policy and all applicable laws and company policies. Stay informed about approved tools and policy updates.

7

REPORTING MISUSE

Any suspected misuse of AI tools or breach of this policy must be reported to the Compliance Department immediately. Reports will be handled confidentially.

8

LEGAL & COMPLIANCE REVIEW

This policy is intended for internal use only and does not constitute legal advice. It must be reviewed and approved by the organization's Legal and Compliance teams before adoption and implementation.

Policy Review

This policy will be reviewed periodically and updated as needed to reflect changes in technology, business needs, and legal requirements.

Proposal vs SOP vs Policy

BUSINESS PROPOSAL

Purpose:

Convince someone.

**“We should
implement this.”**

SOP

Purpose:

Explain a process.

**“Here is how
we do this.”**

POLICY

Purpose:

Establish rules.

**“Here is what is
allowed and required.”**

Where AI Helps

PROPOSAL

AI can help with:

- ✓ Structure
- ✓ Problem statements
- ✓ Benefits
- ✓ Alternatives
- ✓ Timelines
- ✓ Draft recommendations

SOP

AI can help with:

- ✓ Organizing steps
- ✓ Formatting
- ✓ Creating checklists
- ✓ Identifying missing steps
- ✓ Making language clearer

POLICY

AI can help with:

- ✓ Drafting
- ✓ Structuring
- ✓ Simplifying language
- ✓ Creating sections
- ✓ Identifying questions for review

But policy documents often involve legal, regulatory, or organizational requirements.

AI should draft; qualified humans should approve.

ACTIVITY: Create a One-Page Business Proposal

SCENARIO

Your company wants to introduce an AI-powered employee helpdesk.

CURRENT PROBLEM

Employees frequently ask HR and IT repetitive questions such as:

- How do I reset my password?
- How do I apply for leave?
- Where can I find company policies?
- How do I request equipment?

YOUR TASK: Use AI to create a one-page proposal containing the following sections.

1

PROBLEM

Describe the current problem in detail.

- What issues are employees facing?
- How is it impacting HR/IT teams?
- Why is a solution needed now?

2

PROPOSED SOLUTION

Describe your AI-powered employee helpdesk solution.

- What will the solution do?
- How will it work?
- What key features will it include?

3

BENEFITS

Explain the expected benefits of the solution.

- For employees
- For HR/IT teams
- For the organization

4

COST ASSUMPTIONS

Provide estimated costs and key assumptions.

- Implementation costs
- Ongoing/operational costs
- Any key assumptions

5

IMPLEMENTATION TIMELINE

Outline the key phases and timeline for implementation.

6

RISKS

Identify potential risks and mitigation strategies.

- What could go wrong?
- What is the impact?
- How will these risks be mitigated?

7

RECOMMENDATION

Provide your final recommendation.

- Why should the company move forward?
- What value will this investment deliver?
- What are the next steps?

REMEMBER: Your proposal should be clear, concise, and convincing. Use professional language and a logical structure.

ACTIVITY 2: Convert Process → SOP

PROCESS: ORDER FULFILLMENT FLOW

TASK

Ask AI to convert this process into a professional SOP.

THEN CHECK:

- ✓ Did AI preserve all steps?
- ✓ Did it add unnecessary steps?
- ✓ Are responsibilities clear?
- ✓ Are exceptions addressed?

TIP

A good SOP is clear, complete, and easy to follow with well-defined roles and exception handling.

COMMON MISTAKES

Avoid these common pitfalls when using AI for business documents.

1 Asking AI to Invent Company Policies

AI doesn't automatically know your organization's actual rules. It may generate content that sounds correct but may not reflect your company's real policies.

Example:

AI may create leave policy rules that do not match your actual company policy.

2 Treating AI Estimates as Real Data

AI can generate estimates or numbers, but they are not real company data unless you provide accurate inputs.

Example:

"The project will definitely cost ₹5 lakh."
If there is no real cost data, this is just an AI-generated estimate.

3 Missing Exceptions in SOPs

Real processes often contain exceptions. If exceptions are missing, the SOP may be incomplete and not practical.

Example:

What happens if payment fails?
An SOP should address important exceptions.

4 Using AI-Generated Legal Language Without Review

Legal or compliance documents require qualified review. AI can draft, but humans must review and approve.

Example:

AI may generate legal language that is incorrect, outdated, or not applicable to your jurisdiction.

Key Takeaway: AI is a powerful assistant, but human judgment, verification, and approval are essential.
